Delete phone memory files. How do you delete phone memory. How to delete contacts from phone memory. How to delete phone memory in android. How to delete photos from samsung phone when memory is full. Best way to delete phone memory. Delete phone memory message. How to delete phone memory permanently.

Download Article Download Article Deleting, or wiping, the memory from your cell phone can protect your personal data, and prevent others from gaining access to your call history, photos, text messages, email account, calendar appointments, and more. Although the exact process for deleting your cell phone's memory is different for each make and model of cell phone, there are basic guidelines you can follow to ensure that your personal data is wiped from the device; especially before you sell, recycle, dispose of, or donate the device to a charity. 1 Back up your contacts. Before wiping your phone, you may want to back up your contacts list. You'll be able to restore this list after you finish the reset procedure. If you're logged into your phone with a Google (Android) or iCloud (iPhone) account, the chances are good that all of your contacts are backed up in the cloud already. See Back Up an Android Phone on the Google Cloud for instructions on backing up your Android contacts. See Back Up iPhone Contacts for instructions on backing up contacts on an iPhone. 2 Back up your iPhone in with iCloud. If you're using an iPhone, you can use your free iCloud storage to quickly create a backup of your phone's important. This will allow you to restore after the reset process, saving your messages, contacts, and more.[1] Connect your iPhone to the wall charger and to a Wi-Fi network. Open the Settings app and select "iCloud." Tap "Backup" and then tap "Back Up Now." You may have to toggle "iCloud Backup" on first. Wait while your iPhone backs up your essential data to iCloud. Advertisement 3 Back up the important data on your Android phone. Your Google Play Store purchases (including apps) are all automatically saved to your Google account, but data that you've downloaded to your Android is not. This could include movies or music that you've downloaded directly to your device, documents you've saved, and more. There is no common back up tool for Android, but you can use your computer to quickly save any file on it.[2] Connect your Android to your computer using the USB charging cable. Select "Transfer media files" from the USB menu that appears in the Android notification panel. Open your Computer/This PC window on your computer and then open your Android storage. If you're using a Mac, you may need to install Android File Transfer. Find the files you want to save. You can check your Downloads, Pictures, Music, and other folders for data that you may want to save. Copy these files to your computer to back them up. 4 Save your pictures. Your pictures may not be backed up automatically. You'll want to make sure any pictures on your device are saved before erasing everything on it. 5 Back up your SMS (text) messages. Deleting your phone's memory will wipe out all of the text messages you've received. You'll be able to recover your email messages, but your text messages will need to be backed up. Advertisement 1 Plug your phone into a power source. You'll need to have a full battery before you start the reset process, and your device may not let you begin if your battery is too low. Leave your phone plugged in during the reset. 2 Open the Settings app.[3] You can format and reset your Android phone from the Settings app. 3 Tap "Backup & reset." You may have to scroll a bit to find it. 4 Tap "Factory data reset" or "Reset phone.[4] You will be prompted to confirm that you want to proceed with the reset process. 5 Wait while your phone resets. This may take 20 minutes or so to complete. You will not be able to use the phone during this time. 6 Either set up the newly-reset phone or sell/trade it. Once the reset process is complete, the phone has been wiped and is safe to give away, sell, or trade in. You can also start the setup process yourself to use the phone again.[5] When setting up the phone, log in with your Google account to restore your apps and settings. Check out Get-Rid-of-an-Old-Cell-Phone for tips on getting rid of an old Android phone. Advertisement 1 Plug your iPhone into the wall charger. Your iPhone will need to have a full charge before starting the reset process. To be on the safe side, plug your iPhone into the wall charger and leave it plugged in during the entire reset. 2 Open the Settings app.[6] You can reset your iPhone from the Settings app. You can find the Settings app on one of your Home screens, and the icon looks like a set of gears. It may be in a folder labeled "Utilities." 3 Tap "General" and then scroll all the way down. You'll see the "Reset" option at the bottom of the menu. 4 Tap "Reset" and then "Erase All Content and Settings." [7] You'll be asked to confirm that you want to proceed with erasing all of the data. You may be prompted for your screen passcode and your restrictions passcode, if you have one. 5 Wait while your iPhone resets. This can take anywhere from 15-30 minutes, depending on the iPhone. You won't be able to use the phone during the reset process. Make sure to leave your phone plugged in during the entire process, and don't hold the power button while the phone is resetting. 6 Set up or get rid of your iPhone after resetting. Once the reset process is complete, you can safely get rid of your iPhone or set it up again as new. If you are setting it up as new, you'll be able to restore your iCloud or iPhone backup and retrieve all of your data.[8] If you are giving away or selling your iPhone, you'll need to disassociate it from your iCloud phone for more details on recycling your old iPhone. Advertisement Add New Question Question How can I get data off a broken phone? Linh Le Certified Mobile Repair Specialist Linh Le is a Certified Mobile Repair Specialist and the Owner of SC Mobile Repairs in San Clemente, California. He holds a Bachelor's degree from The Franciscan University of Steubenville. On iOS devices, log into your computer or onto a different Apple device to remotely wipe the device. You can do the same thing on Android phones using the Android Device Manager portal on your computer. Question How do I delete pictures on my old phone? Open the folder the pictures are saved in and check the pictures you want to delete. Then, press the delete button. If you want to delete them without recovery, you can try a cell phone wipe to delete them permanently. Question How can I find a sim card on an old flip phone if it's not located under the battery? On many, you'll see a bulky, non-removable area once the back has been taken off. Others do not have a removable sim card. See more answers Ask a Question Advertisement Co-authored by Linh Le. Photo by Amelia Holowaty Krales / The Verge About to buy the latest Samsung phone or are you more of a Pixel person? Whether you plan to trade in your old Android phone for a discount on your new phone, sell it on eBay, give it away to a friend, or drop it off for recycling, you're going to want to wipe it of all your data first by resetting it to factory conditions. Luckily, that's pretty easy to do. Before you start, be aware that these instructions were tested on a Pixel 3 running Android 12, but the process for most current Android phones should be pretty much the same. Needless to say, first make sure that all of your data is transferred to your new phone, backed up, or both. Once your old phone has reset, there's no going back. Reset options give you four choices. You'll be reminded of that you're wiping all your data, and removing your accounts from the phone. Are you sure this is what you want to do? Absolutely sure? Go to Settings Select System > Reset options You will be presented with four choices. Reset Wi-Fi, mobile & Bluetooth is sometimes useful if you're having trouble with connectivity. Reset app preferences will restore all of your app and notification defaults, among other things. Erase downloaded SIMs will help you delete any digital SIMs you no longer need. However, none of these will delete the data on your phone. That's the job of the last choice, Erase all data (factory reset), and that's the one you're going to select. The next screen will tell you what is going to be erased, and which accounts you're signed into. Select Erase all data. If you have a PIN or some other security setup, you'll be asked to enter it You'll get another screen asking if you're sure this is what you want to do. Are you sure? Then hit the Erase all data button. That's it! The process usually takes only two or three minutes. Your phone will reboot and begin with the usual opening questions, such as language, account, network, etc. Once you use those, you'll know that it's worked. There are a few things to be aware of. First, if you've got a Samsung phone, you may be asked for your Samsung account password before you can reset (provided you've created one and added it to the phone). If you've got an Android phone that is using an earlier version of the OS (say, before version 8), the reset may, after it reboots, ask for your login. This could be awkward if you've already sent the phone to someone else. As a result, if you've got an older phone, it's a good idea to turn off your screen lock (by going to Security > Screen lock and selecting None) and deleting your Google account (which you'll find at Settings > Account > Google) before you start the reset. (In fact, that may be a good idea in any case.) There is evidence that some data may remain on a phone even after it's been reset. To be extra careful, you can encrypt the phone before resetting it: Go to Settings > Security > Encryption & credentials and select Encrypt phone Go back to your settings and start the reset process Of course, if you want to be really sure, and you don't intend to give the phone to anyone, you could always grab a hammer. Update September 3rd, 2020, 10:50AM ET: This article was originally published on May 22nd, 2019, and has been updated to mention more recent phones and to update a menu selection. Update March 24th, 2022, 11:40AM ET: Updated to mention more recent phones and update instructions for Android 12.
